

# Basic Lessons

## *Cutting various curved lines*

The purpose of this lesson is to learn to cut various curved lines that will eventually form many of the scroll motifs that you desire.

We will explore how to add ***character*** to the cut lines as well as how to cut them smoothly and precisely. It is important to remember that when you draw and transfer a pattern the character of the lines you cut is something that you need to add while cutting. Normally a line is only a vector to follow.

### **Character of a cut line**

When we speak about the character of the line we are referring to its varying widths and dimensions.

## **Notes :**
