

# Engraving Lessons

## Cutting Straight Lines

This lesson is designed to teach you how to cut straight lines. They are the most difficult of cuts in engraving.

When cutting straight lines a longer heel length and a steeper fave angle will help in keeping the line straight and the width of the cut line consistent.

This drawing is formatted to fit a normal 2"x2" practice plate. After printing it out transfer it to your plate. We will do demonstrations on the video blog as well as explain some of the techniques to use to accomplish the best results.

*I have left space to make notes while watching the video blogs*

## Notes :
